Research Experience

Doctoral Researcher — **Auckland University of Technology**, Health & Artificial Intelligence, Auckland — Oct 2025 to Present

- Developing an AI based biomarker of chronic low back pain from cortical responses to paraspinal stimulation.
- Extending fMRI mapping of the back (Cole et al., 2022; Dörig et al., 2026) into the EEG dimension, adding millisecond timing and oscillatory dynamics, and comparing painful with healthy spinal segments within the same person.
- Designing a case control EEG study combining source imaging, representational similarity analysis and subject level machine learning.
- Led the first pilot and identified an analysis artefact behind an apparent decoding effect.

Data & AI Governance Analyst — **New Zealand College of Chiropractic**, Auckland — Aug 2026 to Present

- Analyse EEG hyperscanning of chiropractor and patient: inter brain and within brain connectivity (wPLI, dPLI) and source level network analysis.
- Apply graph theory to resting state EEG networks in a randomised chiropractic trial of adults and children, with linear mixed models.
- Model longitudinal clinical outcomes (immune response, DASS-21, PROMIS-25) with mixed effects models in R.
- Manage private participant data and consent records.

Instructor — **NUST**, Islamabad — May 2023 to July 2024

- Supervised 18 student term projects; awarded Best Instructor.

Research Associate — **COGNET Lab, SEECS**, NUST, Islamabad — Aug 2021 to Apr 2023

- Researched the robustness of deep learning and computer vision models to adversarial inputs.
- Mentored junior research assistants (Research Assistant until Nov 2022).

Education

PhD	**Auckland University of Technology**, Health & Artificial Intelligence, Auckland, New Zealand	Oct 2025 to Present
MS	**NUST**, Computational Science & Engineering, Islamabad	2017 to 2021
BE	**NUST**, Computer Engineering, Islamabad	2012 to 2016

Skills

Neurophysiology & Signals: EEG and IMU analysis, source localisation, functional connectivity and graph theory, hyperscanning, vibrotactile stimulation

Machine Learning & Statistics: subject level evaluation, leakage and confounding checks, SHAP, linear mixed models, cluster permutation tests, G*Power

Programming: Python (MNE, PyTorch, scikit-learn), R, MATLAB (EEGLAB), C++

Research Practice: Participant data governance, systematic review, scientific writing

Referees

Dr. Nazia Perwaiz, MSCA Industrial Postdoctoral Fellow, School of Computer Science, University of Galway, Ireland; Assistant Professor, SEECS, NUST. nazia.perwaiz@seecs.edu.pk

Dr. Haider Ali, Faculty of Design and Creative Technologies, Auckland University of Technology; AI Engineer, KPMG New Zealand. haider.ali@autuni.ac.nz
